1 Introduction

The Vizier project has the ambition to develop a tool with connected devices and online services which will improve the management of daily activities and autonomy of the elderly. To ensure the achievement of this purpose, user needs and requirements have been assessed through personal interviews and questionnaires in various locations (different countries, and different settings), in which the seniors level of autonomy was varied. The detailed results of these assessments have been reported in the Deliverable 1.1: User needs and functional requirements.

Five key learnings about the elderly and their attitudes towards technology and the adoption of new technologies have been found and emphasized at this stage of the project:

1. **Technology is hard to figure out:** Negative evaluations about technology have been received by the elderly. For many of them, they felt that technology was unnecessary in their daily life. However, from our engagement limited understanding of technology and little experience seems to be the main reason for this negative perspective.
2. **Prevalent need to feel autonomous:** People expect the Vizier tool to be an “external aid”, a device enhancing their possibilities, and sporadically acting as a reminder, but not doing things instead of them. As the seniors we interviewed want to feel autonomous as long as possible, and not to be categorized as old people, it will be important to develop a tool without an overtly “designed/meant for elderly” label.
3. **Different levels of experience with technology:** the seniors’ experience with technology (computers, smartphones, apps) can be quite varied depending on their professional and private background related to the use of multimedia. Furthermore, if the technology is non-adapted for them, they will clearly not engage in its use, or not pursue it. The personalization possibilities of the tool will thus turn out to be a very important element.
4. **The system needs a simple and easy-to-use interface:** The interface of the system must have a limited amount of alternative buttons, click through screens or instructions showing at the same time. Furthermore the buttons as well as the instructions to the system will have to be simplistic, straightforward and succinct. This point is important because it avoids an overload of the seniors’ normal short term memory limitation while they interact with the system, leading to less frustration and an overall more pleasant user experience.
5. **The strengthening of social interaction and activities:** A sense of belonging is very important to all of us, and this is particularly true for seniors, most of whom, enjoy doing group activities. The key driver of their health and wellbeing thus has to take in account this social need.

These five key learnings will allow the establishment of the base platform. For the selection of devices and online services for Vizier, our user needs study has indicated that the following features were the most interesting:

- the improvement of the memory, through the learning of strategies, and with appointment reminders
- recording memories on a computer tool
- internet search
- information about local activities

Interestingly, there was little interest in other suggested features of a more technically advanced nature (e.g. robotic vacuum cleaner, management of the lights, Facebook, relaxation exercises, personal alarm). However, without a clear demonstrator to point to at this early stage, it was difficult to describe to end users. Following the

development of the pre-trial demonstrator further research may be carried out with a more tangible system to showcase. For example paper models will be shown in focus groups, and in the pre-trial the users will face actually working equipment. Perhaps this will provide more positive reactions and responses from end users toward increasingly more advance smart home technologies.

To promote optimal acceptance, as well as natural interactions with the social companion, we organized interviews to have a detailed description of seniors' daily living habits. These interviews also provided an insight into the variety in people's habits and activities according to (1) their level of dependence, (2) their familiarity with the use of computers or other multimedia devices , and (3) their home status (living alone or with someone).

Based upon these dimensions, and contrasted behaviours or situations, we have created fictional personas. These will allow us to develop **Use Case Scenarios**, which reflect a few prototypical profiles of seniors' daily lives, and the way they react towards their activities.

The Use Case Scenarios will then be used to model the type of interactions with the social companion, and identify how the Vizier system can support daily functioning and/or remove some daily frustrations such as negative thoughts or feelings of powerlessness or loneliness.

2 Methodology

2.1 Persona creation

2.1.1 What is a persona?

Personas are "hypothetical archetypes" of actual users. They are *not* real people, but they represent real people during the design process. A persona is a fictional characterization of a user.

The purpose of personas is to make the users seem more real, to help designers keep realistic ideas of users throughout the design process. Personas have proper names and are represented with pictures. Designers and evaluators refer to personas when considering design specifics; for example, "Would Hanna know to click on that button to add a new contact?" Personas put a name, face, and characteristics on users to keep the users in the forefront of design decisions.

A persona includes specific characteristics, demographics, and experience levels from a user profile, for example, which apps they use. Additional information in personas are personal details such as behaviours, attitudes, motivations, and goals.

2.1.2 Vizier personas

For the user needs and requirements gathering (D1.1*), the Vizier consortium conducted a survey among 71 possible end users. 23 of them were interviewed.

The interviewees were the main source of inspiration for our personas. Care organizations Myhomecare, VIVA and Familiehulp each created 3-4 personas, based on the users in Ireland, Switzerland and Belgium, respectively.

On the "Use Case Scenario" canvas, created by Verhaert, you will find the description of the persona in section "1" (Figure 1).

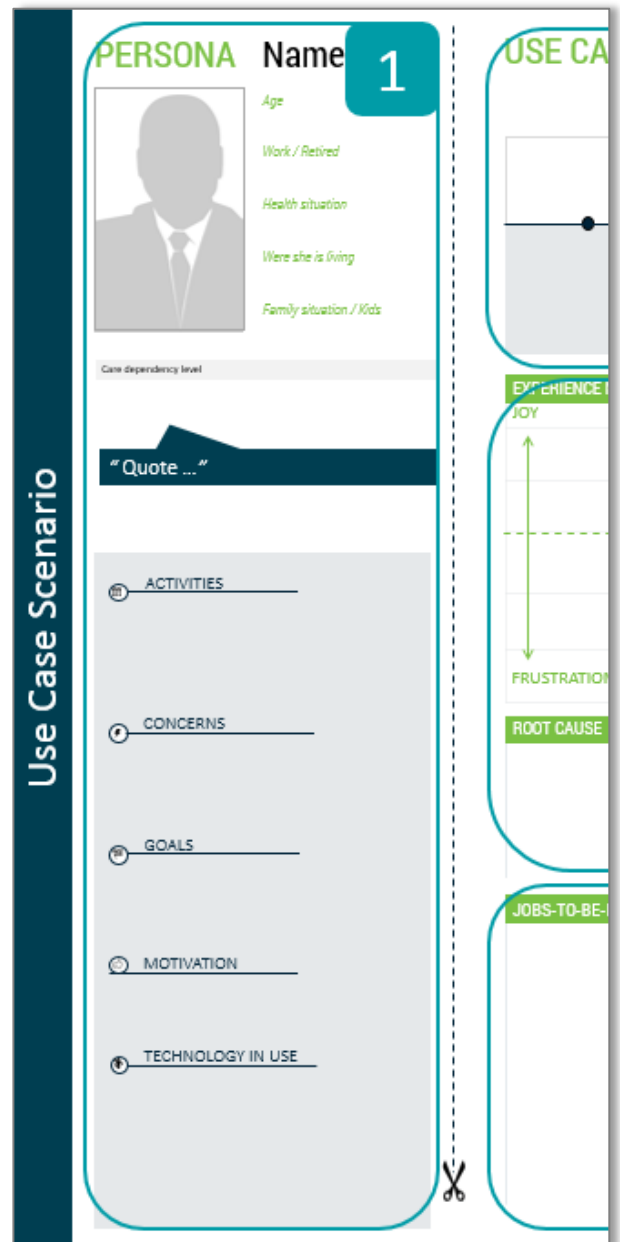

FIGURE 1 DESCRIPTION OF PERSONA

2.2 A day in the life of

To develop a use case scenario for a persona, we need to get to know him or her better. We start by describing a 'normal' day in their life in section "2" of the canvas. At what time do they get up? What are the first activities they do? When does the care giver come by? Etc. Up to the moment they go to bed. Time and description are noted in the grey text boxes below the timeline in Figure 2

FIGURE 2 USE CASE SCENARIO – ONE DAY TOUCHPOINTS

2.3 Experience map

Area “3” is designed to reveal the needs of the persona. Therefore we assess each activity on the experience scale. If an activity brings joy, it’s mapped above the ‘neutral’ line (green dotted, Figure 3). The higher above the line it’s mapped, the more joyful this activity is experienced (relative to the other). Activities that are frustrating are mapped below the ‘neutral’ line and the more frustrating an activity, the lower on the map it’s marked. Below the experience map, the root cause is explained, why the activity is experienced as indicated (Figure 3).

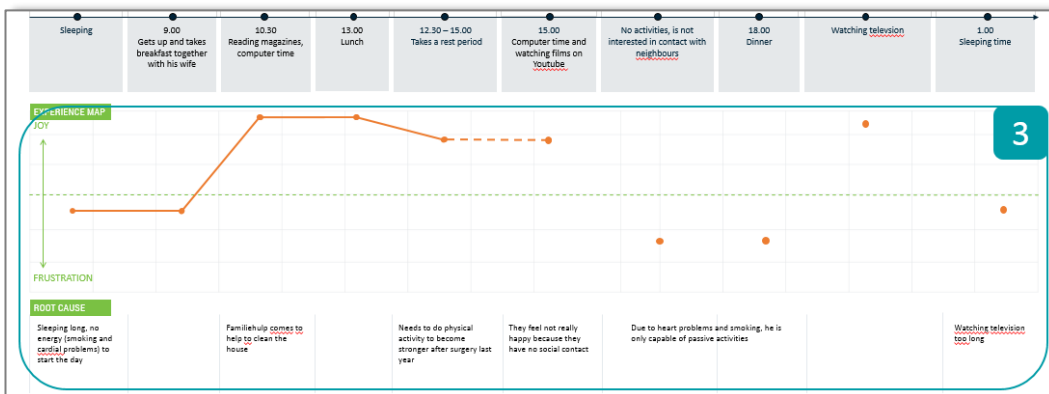

FIGURE 3 TO FINISH THE DOTS ON THE MAP ARE CONNECTED AND FORM AN EXPERIENCE GRAPH

Areas of frustration may be opportunities for Vizier to improve the experience of that activity. Other activities could score higher on the experience map when Vizier supports the persona.

2.4 Jobs-to-be-done by Vizier

The last section (“4”) of the “Use Case Scenario” canvas is the part where we imagine what Vizier could do for this persona to make his / her life more pleasant. We describe touchpoints of the system with the user and the function that can be fulfilled at that point (Figure 4).

FIGURE 4 FULL USE CASE SCENARIO CANVAS

3 Ten Use Case scenarios

The 3 care organizations of our consortium (Viva, Familiehulp and Myhomecare) worked on this set of 10 persona. The 10 represent the breadth and diversity of their clientele. Men and women of all ages, living independently or those requiring some domestic support or individuals dependent on others for household activities, personal hygiene or medical conditions. Some of our seniors take computer lessons, some use a smartphone, others are people that are reluctant to engage with things like Facebook. Meet our end users:

Use Case Scenario

PERSONA

Catherine

App
67 years old
Widow / Retired
homemaker

Health situation
Falls risk / High BP
Widow's life story
Remote area in countryside -
family own farm
Family situation / Kids
2 daughters SO live at home

Use my smartphone for calls only at present.

ACTIVITIES

- Family oriented
- Likes being active - walking
- Loves to read

CONCERNS

- Falls risk - unsteady
- Activities
- High BP - on meds

GOALS

- Keep mobile
- Keep BP down

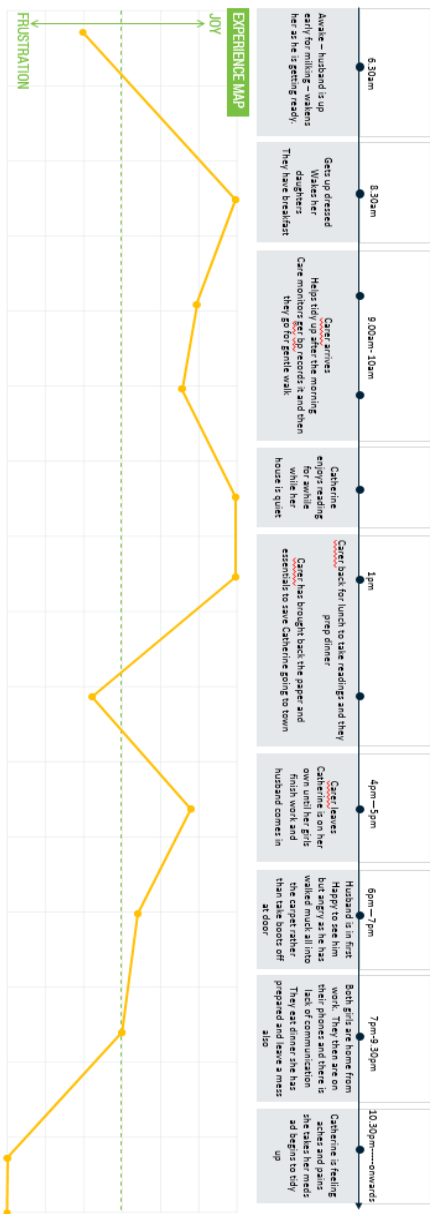

MOTIVATION

- Enjoys walking
- Enjoys walks with carer
- Family time is important to her

TECHNOLOGY/IN-USE

USE CASE SCENARIO - ONE DAY TOUCHPOINTS

EXPERIENCE MAP

JOY

FRUSTRATION

6:30am	Awake - husband is up early for milking - wakens her as he is getting ready.	Get up dressed	Wakes her daughters They have breakfast	9:00am-10am	Carer arrives Help tidy up after the morning Care monitors BP, records, and then they go for gentle walk	1pm	Carer back for lunch to take readings and they prep dinner	4pm-5pm	Carer leaves Catherine is on her own until her girls finish work and husband comes in	6pm-7pm	Muscles are first Happy she has but angry as he has walked mud all into the carpet rather than take boots off at door	7pm-3:30pm	Soft spots have been from their phones and there is lack of communication They eat dinner she has prepared and leave a mess also	10:30pm onwards	Catherine is feeling better and as she takes her meds and begins to tidy up
--------	--	----------------	---	-------------	--	-----	--	---------	---	---------	---	------------	--	-----------------	---

ROOT CAUSE

A little frustrated husband
Wakes her to ask Her where stuff are **SS**
Works clothes
Feels still needs her medication

They have a good chat over breakfast and the company does her the world of good

Carer arrives Household duties done
Worried her BP will be up
Not enthusiastic about a walk, but she does. Feels good when she gets out into fresh air

Feels shy having Time to herself
House is clean
She is happy to take a break from her book
Great her carer and the carer brought paper, Catherine loves to read about current affairs.

Feels the evening is long
Doesn't want to be on her own
She phones her daughter
Answerer calls but when they are home they never have the phone out of hand

Happy, husband is in from work, then so angry when she sees the mess
Feels he takes her for granted

Catherine boots forward to everyone home to hear about the day. She now is sitting in silence. There all on phones.
Get up and leave mess for her to clean up. He thanks her for dinner. Nosing says her how her day was. She was feeling lonely

Her arthritis has her feeling stiff, she now has to clean up and prep for the following day
Her pills are wide up on phones, don't bills an eye to her and she gets off to bed.

JOBS TO BE DONE BY VIZIER

Vizier Alarm in am then it activates her radio to Come on to pick up her mood

Vizier tells medication and reading music to Help Catherine fall back to sleep

Security option on Vizier to allow her know carer has arrived at door

Weather update
Health App - she can take her BP and it is sent to Vizier. It then would make a recommendation on how to if flashing light it sends alert text to family

App for reading
Recommendation for new books
Never link within her Vizier that she carer perspective to what news she reads **SS** (Catherine never **SS**)

Option for audio book if she is feeling tired.

Option to shop online with delivery at home

Messaging app
Social link to her daughters

Local Event Agenda
Sent to her through Vizier

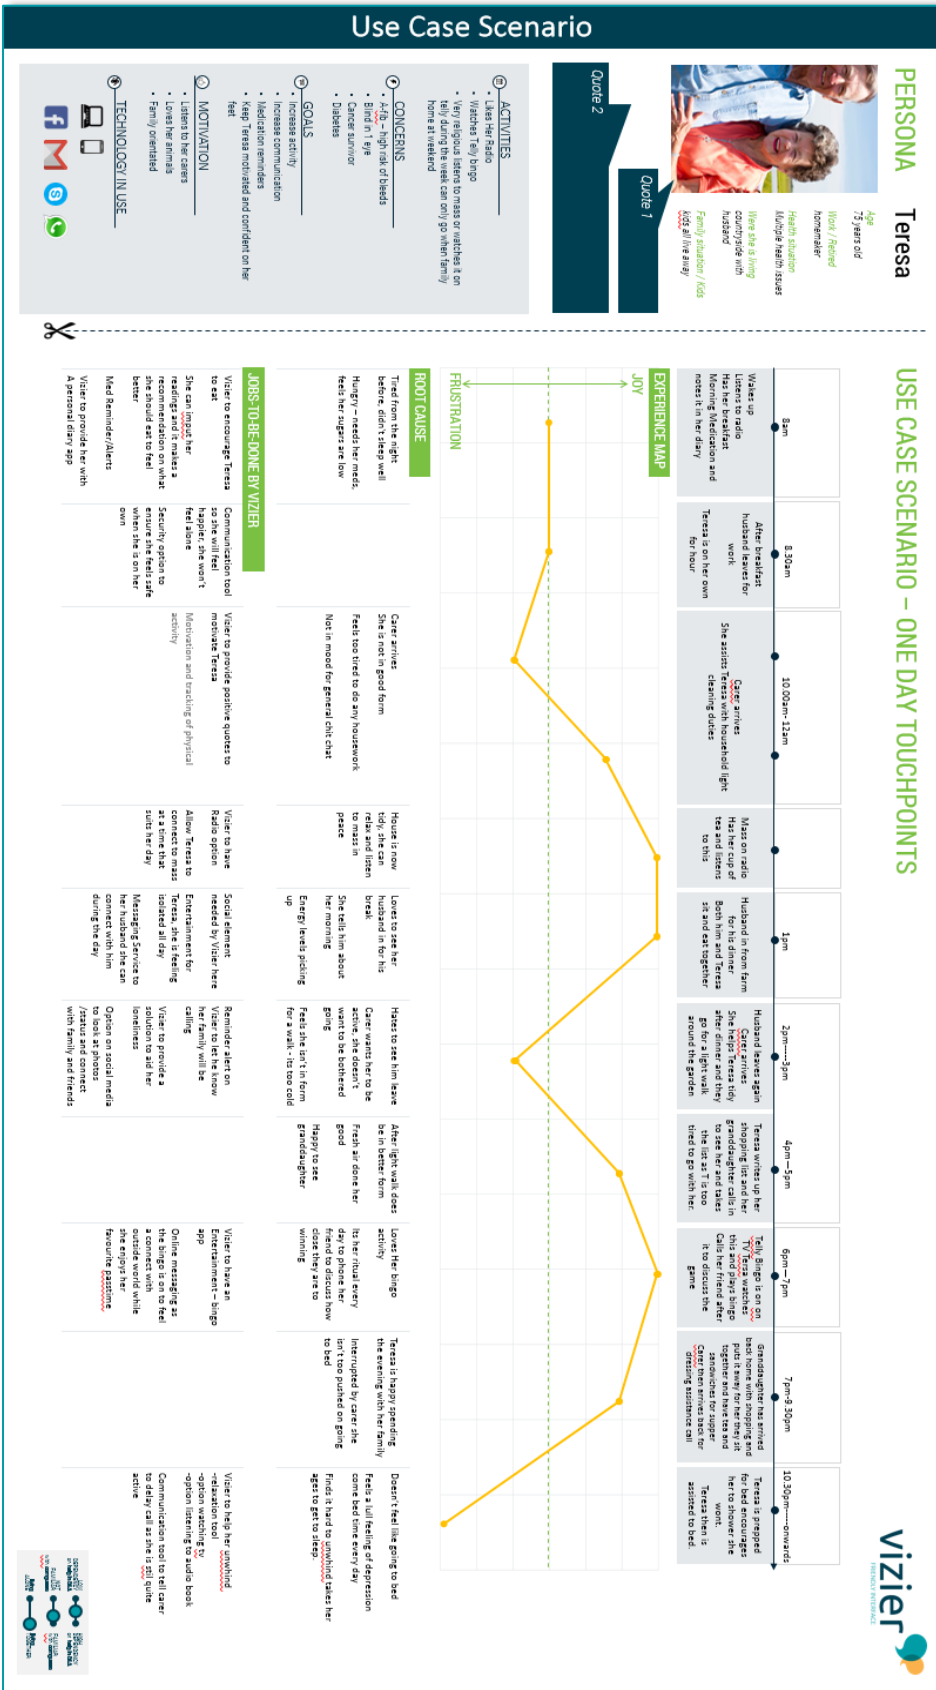

What is on that she can spend 15 minutes of hours and be social

Should we have Vizier Inheritance or whiteboard

Post it notes she can leave and assign to her family

Again, social option for Catherine
Vizier could provide some sort of entertainment value
Connections would ease her loneliness

Use Case Scenario

PERSONA

Karla

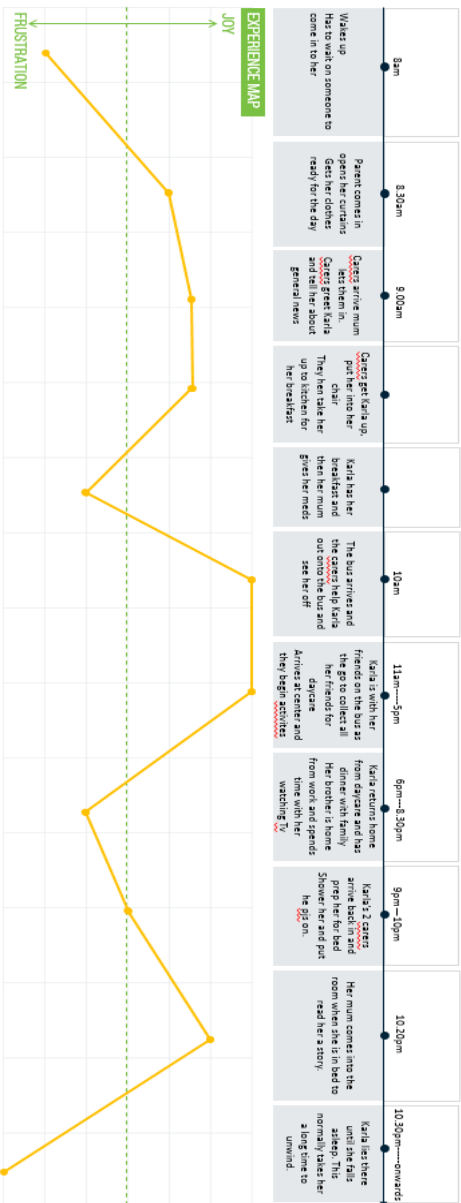

Age: 22 years old
 Mom / Friend
 cannot work due to disability

Health situation: Genetic Fragile/Hereditary
 likes to go shopping with family
 Family situation: Kids no children

Quote 1

Quote 2

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

Time	Event / Touchpoint	Emotional State
8am	Wakes up, has to wait on someone to come in to her	FRUSTRATION
8:30am	Parent comes in, gets her curtains, gets her clothes ready for the day	Joy
9:00am	Caro's arrive mum lets them in, Caro's greet Karla and tell her about general news	Joy
9:30am	Caro's get Karla up, port her to school, then she has to sit for her breakfast	Joy
10am	Karla has her breakfast and then her mum gives her meds	Joy
10:30am	The bus arrives and she goes to school, she sees her friend	Joy
11am-1pm	Karla is with her friends on the bus as they go to collect all the things for dance	Joy
11am-1pm	Arrives at center and they begin activities	Joy
6pm-8:30pm	Karla returns home from dance and has dinner with family, her brother is home from work and spends time with her watching TV	Joy
9pm-10pm	Karla's 2 cats arrive back home, she goes to bed, she showers and puts on her PJs	Joy
10:20pm	Her mum comes into the room when she is in bed to read her a story	Joy
10:30pm-onwards	Karla has there normal sleep, she wakes up in the morning	Joy

ROOT CAUSE

Feeling lonely
 Dependent on others to get her up and dressed
 Lying there idle
 Tired from the night before struggling to sleep

JOBS TO BE DONE BY VIZIER

Help to see the sun is out
 She likes to see her mum in the morning
 Her mum cheers her up, chooses her favourite shirt
 She is happy to be up and dressed

Communication tool between Karla and her carers
 Online schedule of when they are in- if they should be running late, they can notify her
 Make her feel in control

Reminder alerts to get her ready about when her friends are going to dance
 Karla is in contact with all her friends, they can help her feel upset leaving them
 Social Media connection
 Again Entertainment through the video when she has no control over what is on TV, she can use her Vizer

Karla doesn't want to get ready for bed
 She does feel better about after her shower
 She loves listening to music
 Karla isn't tired and gets upset she is now in her bed
 Feels isolated from family
 Feels alone

If her mum wasn't able to get to her in a quick time
 Option for entertainment
 Messaging Service: if you call on her, but she is not in her room, she can be more independent
 Control to 3 TV in her room using Vizer as Control
 She can turn off her own lights when she is ready for sleep

ACTIVITIES

- Attends Day Care 3 days per week
- Likes when her family are at home especially her nephew
- Likes her Doll takes it everywhere
- Loves TV - especially all team soap operas

CONCERNS

- Said Herms
- Struggled to motivate
- Unable to sleep late

GOALS

- Help Karla enjoy her activities to encourage her to be happy
- Keep Karla safe from self-harming
- Improve her communication to reduce her frustration

MOTIVATION

- Influenced by her family
- Her brother Henry can't in her mood and motivate

TECHNOLOGY IN USE

Use Case Scenario

PERSONA Julie

Age
70 years old - socially and physically active

Work/Retiree
Retired, worked at a hospital (no use of a computer tool at work)

Health Situation
Afraid to have Alzheimer's disease
Lives with her husband, in a flat without assistance (no children).
Wife has a long

Quote:
"I already have tips to improve my memory, learning my shopping list, writing my appointments on my agenda and trying to learn them."

Goal:
"I want to improve my memory"

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

Time	Activity
08:00	waking up
09:30	having coffee at VIVA's coffee
09:30	fitness
11:00	shopping
13:00	going to psychologist appointment
14:00	sleeping
16:00	teaching how to knit to children at VIVA
18:00	walking
21:00	attending a concert
23:00	sleeping

ACTIVITIES

- Going to Di-Ding classes and fitness
- Attending conferences about aging
- Walking
- Improving memory with cognitive games

CONCERNS

- Afraid to have Alzheimer's disease like her mum
- Worried about her memory difficulties in everyday life and a loss of autonomy

GOALS

- Improving her memory
- Staying physically active

MOTIVATION

- Sharing moments with her husband
- Taking part to social activities organized in her town and meeting new people (VIVA)

TECHNOLOGY IN USE

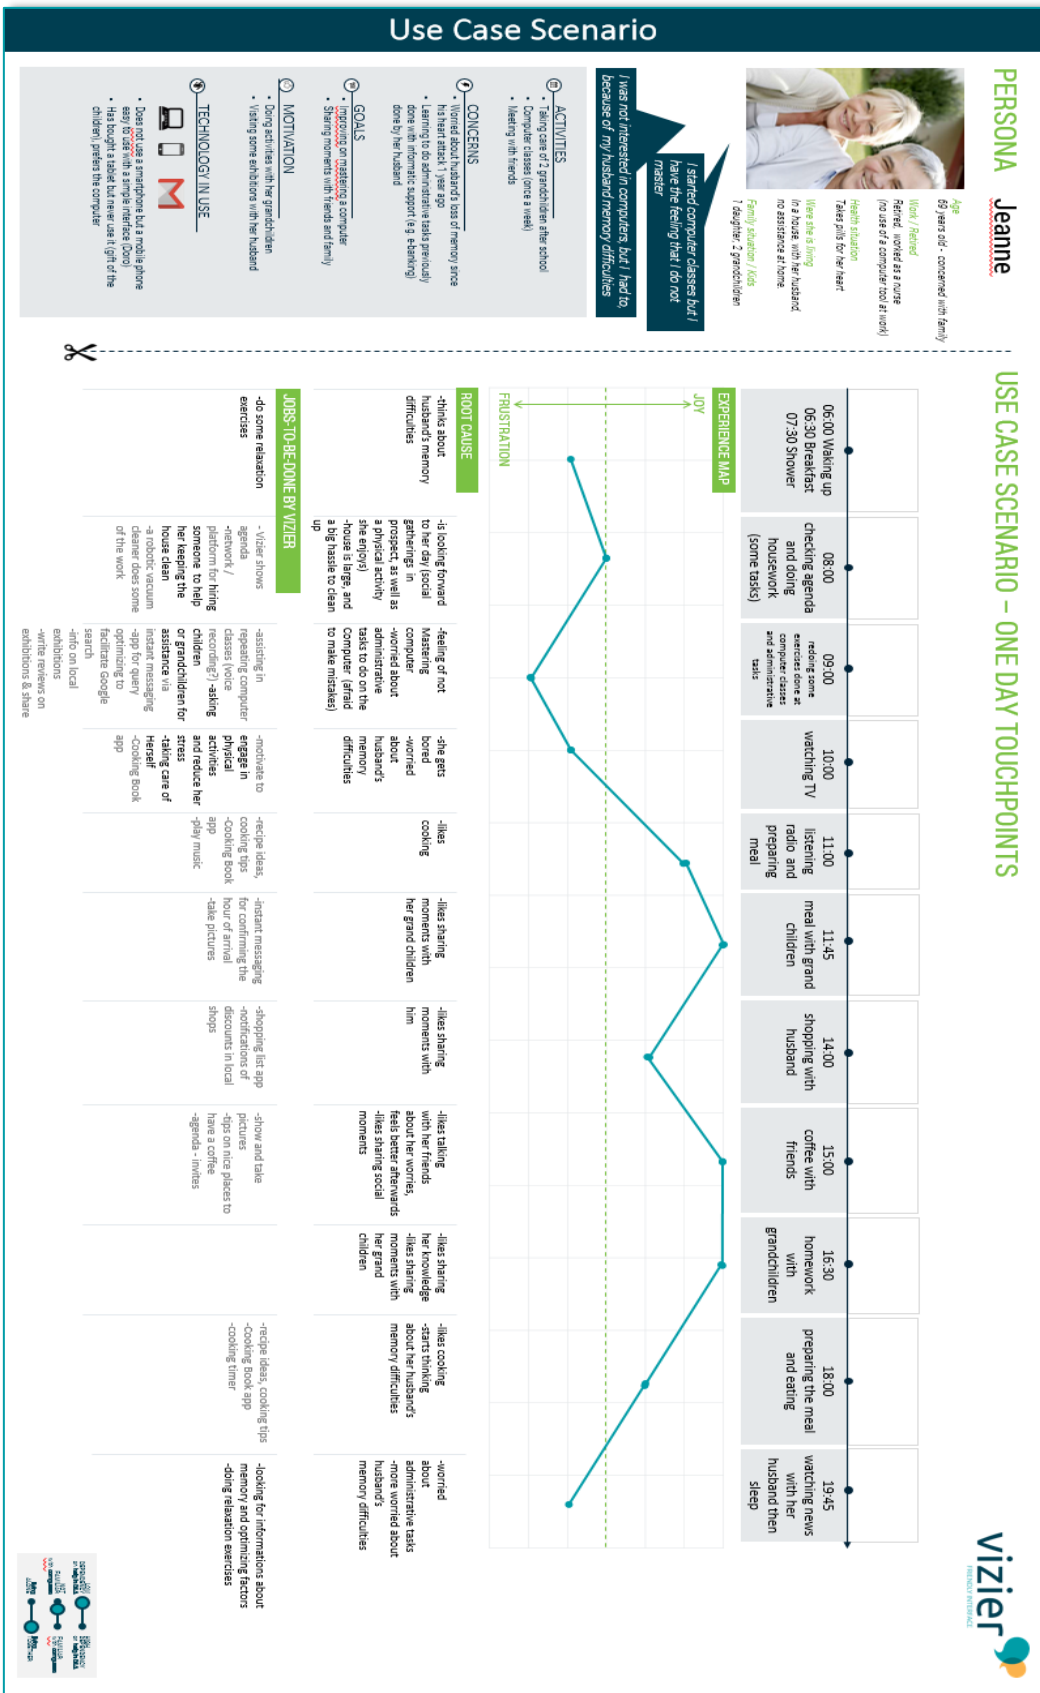

- Does not use a smartphone but a mobile phone easy to use with a simple interface (Noo)
- Owns a computer (Lenovo) but not comfortable with its use

ROOT CAUSE

- waking up with no alert but with the sun of the day
- sense of belonging to a group
- meeting with new people as well as good friends
- out for good people's names
- enjoys doing physical activity
- exercise and people as well as good friends
- out for good people's names
- forgets something learned
- shopping list
- talks about complaints
- talks about an alarm to use in case she were assaulted in the street
- having a rest
- enjoys sharing her knowledge
- social moment -sense of purpose
- enjoys physical activity
- enjoys the opportunity meeting with neighbors and talking with them
- but forgets people's names
- listening to music
- enjoys social and cultural activities
- worried about her memory difficulties and how she is going to age

JOBS-TO-BE-DONE BY VIZIER

- having a strategy for remembering people's names, or learning new names
- fitness activity tracker with goal setting and feedback
- learning efficient memory strategies and using Vizer lists and reminders
- Vizer sends inspiring recipes
- agenda function
- easy contact function (phone / mail / messages)
- learning more about memory and aging
- Vizer able to analyse her own negative factors and improve them
- Vizer switches into 'no interruptions' modes
- tips on knitting and other craftwork
- having a strategy for remembering people's names, or learning new names
- activity tracker with goal setting and feedback
- network of 'walking groups', messages and invites to local walking events
- info on music concerts nearby
- ticket purchasing online
- easy scheduling in agenda, invite friends, search a date
- doing some relaxation exercises
- once she is more relaxed, thinking of what she has learned regarding limiting factors for memory decline, and what is in her range of action (use of implementation intention strategy to remember having this sequence of thoughts whenever she feels anxious about her memory)

Use Case Scenario

PERSONA

Charlie

Age: 72 years old - active and athletic
 Work: Retired
 Retired administrative officer (Use of a computer tool at work)
 Hobbies: Gardening
 Likes to go to assistance at home
 Family situation: Retired widow with no kids

Use Case Scenario

I do not use computer when there is something with money/ (e.g. e-shopping, online shopping)

Use my computer to send emails, sort out photos, write letters with word, call with Skype (only family abroad) (60/30/15)

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

ACTIVITIES

- Going to some exhibitions, conferences here or with friends
- Going to gym classes twice a week
- Volunteering
- Doing some physical exercises in the back every morning after breakfast
- Meeting with friends in the afternoon

CONCERNS

- Remaining independent as long as possible
- Staying in a good physical and cognitive health

GOALS

- Make sure people have the feeling of belonging of a group
- Healthy lifestyle

MOTIVATION

- Staying safe at home (inside and in the garden)
- Taking pictures

TECHNOLOGY IN USE

- Uses a smartphone
- In case of Facebook because no real contact found it to be safe

EXPERIENCE MAP

07:00 Waking up	08:00 Taking breakfast and reading news papers	09:30 Housework	11:00 computer work (checking mails, looking for some informations about exhibitions, theater)	12:00-13:30 preparing meal and eat	15:00 Gym class	16:30 Calling friends to find share a drink and sending a WhatsApp to nephew to confirm Skype of tonight	18:30 Preparing meal and eating	19:00 Skype with family	21:00 Going to the theater	22:30 Going to bed
-----------------	--	-----------------	--	------------------------------------	-----------------	--	---------------------------------	-------------------------	----------------------------	--------------------

EMOTIONAL STATE: JOY (peaks), FRUSTRATION (troughs)

ROOT CAUSE

- good physical and mental well being
- after exercises
- feeling of being active

JOBS TO BE DONE BY VIZIER

- agenda function
- activity tracking, goal setting, exercise program
- alarm watch
- info on local exhibitions, conferences
- robotic vacuum cleaner
- messaging, phone calls
- info on local exhibitions, conferences
- buy tickets, arrangements
- would enjoy sharing more meals with friends at home or at a restaurant (but then, money problem)
- instant messaging to meet up for meals @home
- agenda function
- activity tracking, goal setting, exercise program
- alarm watch
- reminders of the WhatsApp message to confirm Skype appointment (He tends to forget)
- videoconferencing
- would enjoy sharing more meals with friends at home or at a restaurant (but then, money problem)
- instant messaging to meet up for meals @home
- videoconferencing
- agenda function
- info on local theatre
- Vizier switches into 'no intrusions' mode

Use Case Scenario

PERSONA

An

Age: 65 years old
 (Widow / Retired)
 Retiree (Administrative clerk)
 Health status: 0-dependent
 Where she is living: in a home with partner (owner)
 Family situation: Kids
 She lives alone (has lost all her family)

Level care dependence: 13 - a low level (she lives in Holland)

"I would rather use the manual..."

"I have never seen a doctor before..."

ACTIVITIES

- Likes reading and crafting
- is reading papers and news on internet, is puzzling
- Photography is her hobby
- Played earlier Nintendo

CONCERNS

- Needs oxygen 24/24 after pulmonary problems
- Feels alone and lightly depressive after loosing all family members

GOALS

- Working together for DLA with the neighbour (calls her if she needs help)
- To care for her little dog

MOTIVATION

- Looking to pictures to keep memories alive

TECHNOLOGY IN USE

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

06:30	Gets up and takes breakfast	07:30	Washing and dress up with or without professional carer	07:30 - 08:30	Sometimes she takes a bath to relax	08:30	Reading, sending mails, listening to music, home banking	12:00	Time for lunch	13:00 – 15:00	Takes a rest period	16:00	Hydroptic with help of neighbour	18:00	Looking at pictures on television with a USB stick	18:00	Prepare and eat dinner	19:00	Watching television	23:00	Sleeping time
-------	-----------------------------	-------	---	---------------	-------------------------------------	-------	--	-------	----------------	---------------	---------------------	-------	----------------------------------	-------	--	-------	------------------------	-------	---------------------	-------	---------------

EXPERIENCE MAP

ROOT CAUSE

Feels alone in the morning, has to take medicine

Needs to do physical activity to enjoy more her body
 -Best time of day to get help but she sleeps

Feels bad when all memories come back

Watching television gives a wrong preparation to sleep

JOBS-TO-BE-DONE BY VIZIER

- activates her radio to wake her and get her into a good mood
- play exhilarating music to help An enjoy the breakfast
- give a reminder for taking her medication
- send her healthy breakfast recipes for next morning
- voice message/alert to let her know carer is coming soon
- security option to allow her know carer has arrived at door.
- open the door with smartphone
- weather update
- health App (H-Q) data collection and recommendations
- alarm notifications when dangerous levels are noticed
- reading assistance
- renews sites for new books that she might like
- play audio book if she is feeling tired. Combination with intelligent loudspeakers
- shop online
- engage in a fitness program (social & fun)
- provide relaxation exercises
- social link to her neighbour and a communication tool
- local event agenda
- motivate to leave her house and be social in the now
- post it pictures she can leave and assign to her family and her friends
- handcrafting social network: idea sharing, events, ...
- memory training and games as an alternative to passive TV watching
- her house as a meeting point for other lonely people

Use Case Scenario

PERSONA Cis

Age: 73 years old
Role / Role: Retiree (retiree mother)
Health situation: Retiree (retiree mother)
Interests: Home as a hobby
Location: He lives alone in a new flat
Family situation: Kids
He lives alone

Level care dependence: 2+ + middle level (low level of functional)

ACTIVITIES

- Takes many activities in the parish
- In summer likes cycling
- In winter home trainer
- Solves crosswords in the newspaper

CONCERNS

- Has a urostoma
- Last year he was undergoing seven times surgery
- Feels alone depressive after divorce

GOALS

- Working for the church (celebrations)
- Take no longer many painkillers

MOTIVATION

- Wants to keep memories alive (church and ex) for himself and for others

TECHNOLOGY IN USE

- [Icons for smartphone, tablet, laptop]

"I would like to be reminded of appointments..."

"I can not keep up anymore..."

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

ROOT CAUSE

Feels alone in the morning, has to take medicine

FRUSTRATION

Praying is useful for Cis to feel good

JOBS-TO-BE-DONE BY VIZIER

Vizier radio alarm

Vizier plays church music for Cis

Vizier gives a reminder for taking his medication

EXPERIENCE MAP

JOY

FRUSTRATION

7:30 Get up, take medication, wash, morning prayer, breakfast

07:30 Praying

9:00 Goes outside by car (he does not drive himself) to do groceries or to go to the doctor

10:30 Read, solve crosswords in newspaper, prepare for celebrations

11:30 Lunch

12:00 – 14:00 Takes a rest period

14:00 Visit his connections in church or work, read, rest

17:00 Dinner with his son living near to Cis

18:15 Bed home

19:00 Celebration in church 19:45 Watching TV

23:00 Sleeping time

JOBS-TO-BE-DONE BY VIZIER

Vizier radio alarm	-Voice message/alert to let him know carer is due soon	-Games / entertainment (revisited)	Weather update
Vizier plays church music for Cis	-istic: security option has arrived at door: -Open door with smartphone		Fall prevention App – If he falls, alarm is sent to an emergency center that can notify informal caregivers? It also can result in a professional intervention.
Vizier gives a reminder for taking his medication			Fitness program on Vizier Platform
			Social link to the members of the church and a communication tool
			Local event agenda, more than church activities
			Life tree, tool to think a story of his own life
			Social media Contact options
			Memory training and games instead of passive TV watching
			Her flat as a meeting point for people to pray and do meditation

Use Case Scenario

PERSONA

Rie

Age: 33 years old
 Work / Career: Child welfare carer
 Health situation: Physically fit
 Home: 2nd floor in a flat (MFL) on the 2nd floor
 Family situation / Pets: Single, no pets
 She likes to shop

Level care dependence: 35 - 45 (first part of the High level 1, in MFL)

"I expect a lot of the prototype"

"I hope an app will come with which I can program my household appliances"

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

ACTIVITIES

- Temporarily wheelchair bound
- Likes singing in different circumstances
- Sharing pictures
- Taking a bath
- Each day is different

CONCERNS

- Has a severe hernia and fibromyalgia
- She is experiencing a lot of difficulties in grocery shopping, cleaning, preparing healthy meals, ...

GOALS

- More courage to get up in the morning
- Be able to program devices in the house she lives

ACTIVATION

- Looking at pictures to keep memories alive

TECHNOLOGY IN USE

JOY

FRUSTRATION

ROOT CAUSE

Feels alone in the morning, feels tired and doesn't have the courage to start the day.

JOBS-TO-BE-DONE BY VIZIER

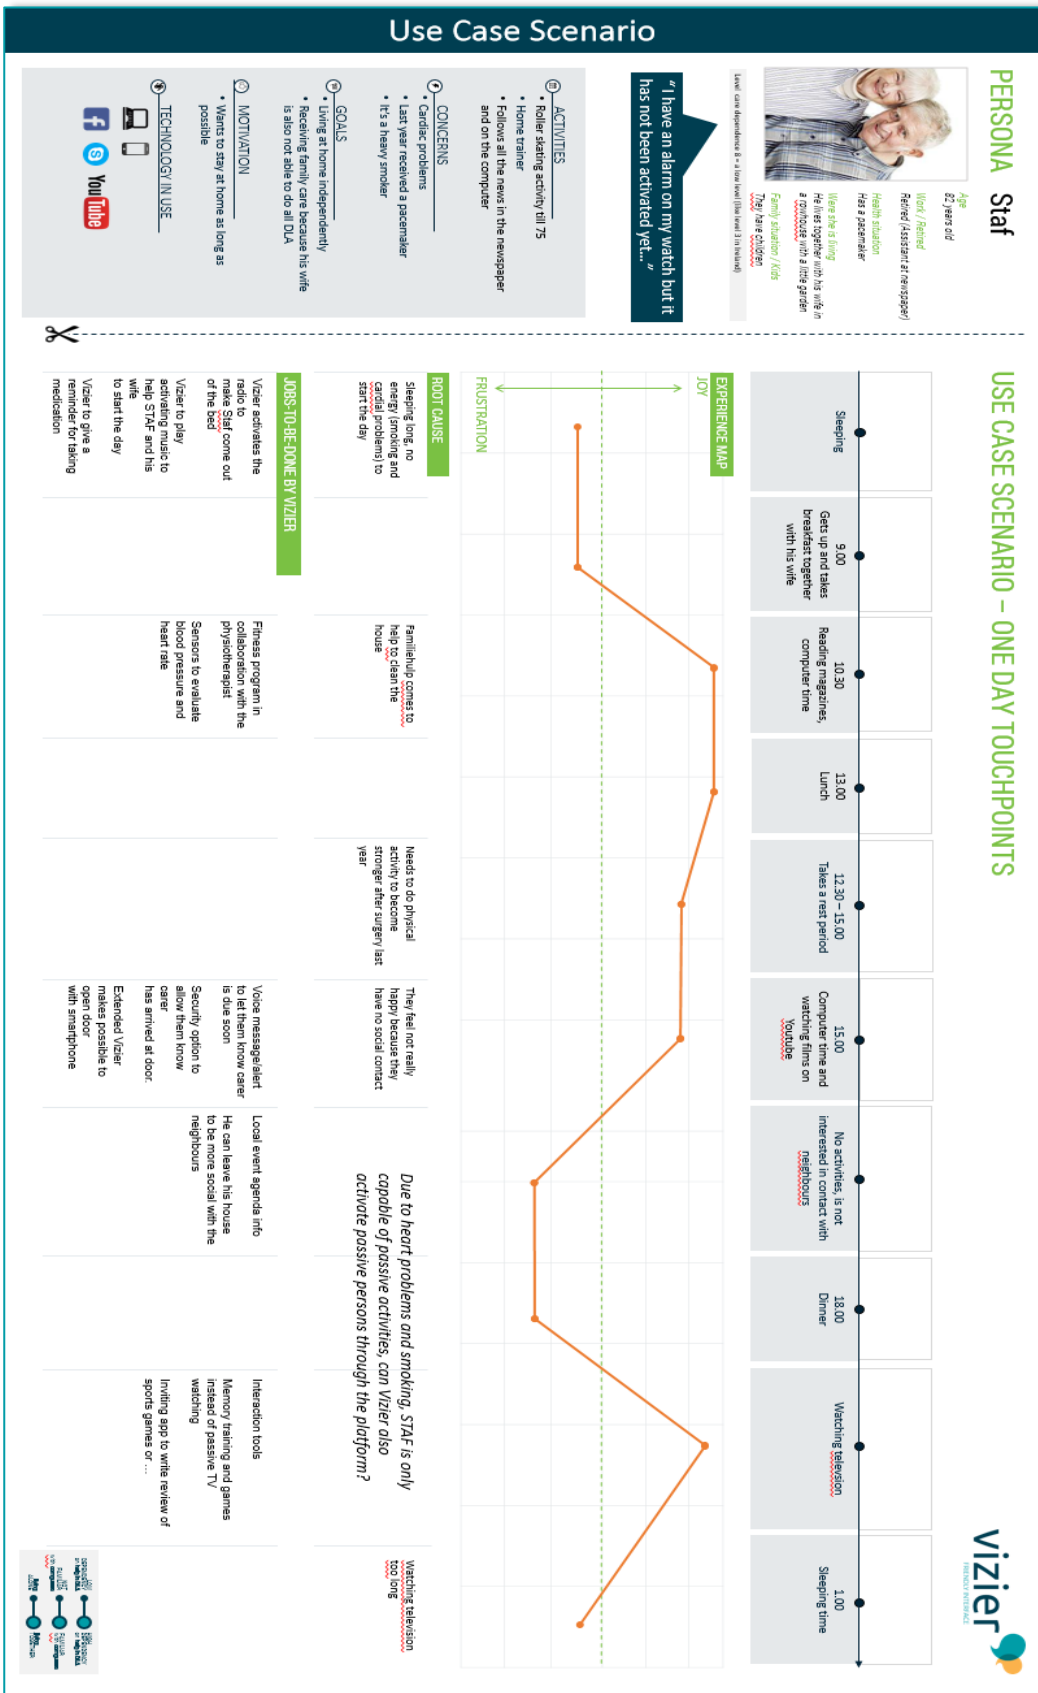

07:30	Get up and takes breakfast, feels tired	07:45	Taking medicine and again in bed (with a little bit water) - coffee	08:00 - 10:00	Rest? Also using Facebook and computer	10:00	Reading, sending mails, listening to music, housekeeping	12:00	Time for soup and a sandwich		Time for music	22:00	Sleeping time

No structure in this part of the day – Needs other new activities to activate her life

Wants to fine inclusive but is not reaching this goal – she only receives 8 hour assistance in two sessions of 4 hours

JOBS-TO-BE-DONE BY VIZIER

Vizier enable Rie to message the street worker when she is unable to alert her to come in	Communication tool between Rie and her carers	Weather updates – by good weather encourage to use the scooter	Health app – registers some data concerning health, if then make recommendations	If alarming data, it sends alert to an emergency center that can verify internal caregivers	Communication tool to keep in contact with her sister and with her friends to ensure she doesn't feel alone	Training tool with feedback! So she can follow the progress in training muscles	Social Media connection	Messaging service/Skype calls Vizier would help her feel less isolated and more independent	Control to a TV in her room using Vizier as control station	She can turn off all necessary devices when she is ready for sleep	Part of the program facilitates by Vizier:
---	---	--	--	---	---	---	-------------------------	---	---	--	--

During the process of developing a set of 10 persona, the partners started with the personal data available from questionnaires and interviews. This was a first exercise in the pseudonymisation & anonymization. This is the processing of personal data in such a manner that such data can no longer be attributed to a specific data subject without the use of additional information. Provided that such additional information is stored separately and is subject to technical organizational, the anonymised data cannot be used to identify a natural person. To this effect, each persona in this set of 10 has been pseudonymised. The photos are not linked to the existing persons.

4 Assimilation

The set of 10 personas and their use cases, lead us to imagine how Vizier could be constructed in order to fulfil the needs of as many users as possible. Figure 5 shows how we mapped Vizier functions that would fit the personas (Who would use this function?). This view of both common and different needs allowed us to determine the core functionality for the basic version of Vizier.

FIGURE 5 PERSONAS VS USER NEEDS

5 Two target use cases

As a synthesis of the work done on the use cases, we created 2 use cases to guide the further development. One is a very independent older adult and the second has a carer to support her to live on her own.

Meet Mary and Julie.

Use Case Scenario

PERSONA Julie

70 years old - socially and physically active

Goal: *Julie would like to be able to use a computer tool to help her*

Health situation: *Julie has Alzheimer's disease*

How she is living: *She lives with her husband in a flat without assistance. No children.*

"I don't want a smart phone, it's too complex."

"I already have lots to improve my memory learning my shopping list, writing my appointments on my agenda and trying to learn them."

ACTIVITIES

- Going to Qi-Gong classes and fitness
- Attending conferences about aging
- Walking
- Improving memory with cognitive games

CONCERNS

- Afraid to have Alzheimer's disease like her mum
- Worried about her memory difficulties in everyday life and loss of autonomy

GOALS

- Improving her memory
- Staying physically active

MOTIVATION

- Staying motivated with her husband
- Taking part in social activities organized in her town and meeting new people (VIVA)

TECHNOLOGY IN USE

- Does not use a smartphone but a mobile phone easy to use with a simple interface (Doro)
- Owns a computer (Lenovo) but not comfortable with its use

USE CASE SCENARIO – ONE DAY TOUCHPOINTS

ROOT CAUSE

-waking up with a headache
-feeling nervous about the sun of the day

JOBS TO BE DONE BY VIZIER

-the social companion wishes Julie a good morning, when the system notices she's up.
-she checks her agenda on the tablet
-she reminds her contact details
-she checks her application provides a strategy for meeting new names

EXPERIENCE MAP

08:00	waking up
09:30	having coffee at VIVA's coffee
09:30	fitness
11:00	shopping
13:00	going to psychologist appointment
14:00	sleeping
16:00	teaching how to knit to children at VIVA
18:00	walking
21:00	attending a concert
23:00	sleeping

JOBS TO BE DONE BY VIZIER

-Julie accepts the invite to VIVA activities and these are added to her calendar. contacts are added to her agenda on the tablet
-Vizier reminds her contact details
-Alzheimer Club application provides a strategy for meeting new names

-Julie has set her personal fitness goals; her activity is tracked and she receives feedback
-Vizier congratulates her with her achievement

-the social companion reminds Julie to go shopping and buy groceries
-Vizier encourages her to use the "When... Then..." strategy.

-agenda function and reminders
-easy contact function (phone / mail / messages / sensor (smart watch))
-Vizier detects an unusual event, an alarm message is sent to the appointed people.

-Vizier switches into "no interruption" mode
-Julie can wake up gently with her chosen music.

-tips on knitting and other craftwork events are presented
-Julie can share her own designs of knitters with her contacts

-activity tracker with goal setting and feedback
-network of walking groups, meetings and walking events
-Julie practices the "When... Then..." strategy to remember people's names.

-info on music concerts nearby
-easy scheduling in agenda, joins date
-Julie reads and answers her mails and messages on the tablet

-doing some relaxation exercises

ROOT CAUSE

-sense of belonging to the group
-meeting with new people as well as good friends
-but forget people's names

-enjoys doing her shopping
-meeting new people as well as good friends

-forgets her shopping list
-learned shopping list

-talks about her complaints
-Julie about an alarm that she were accused in the street

-taking a rest

-enjoys sharing her social moment
-sense of purpose

-enjoys physical meeting
-enjoys the opportunity meeting with neighbors and talking with them people's names

-listening to her social and cultural activities

-worried about her memory difficulties and how she is going to age

LOW DEPENDENCY PROFILE

6 Conclusions

6.1 Product configuration

This study has underscored the importance of a broad platform, such as Vizier to be customizable. Not every user will use every possible function. However, every user should be able to select the functionality that they require to a degree.

We identified the following functionalities as basic common requirements for most users. These are the functions every Vizier user will get.

1. Communication (phone, mailing, messages, ...)
2. Internet services (like Facebook, Google, ...)
3. Agenda
4. Reminders (medication)
5. Pictures

From the personas we were able to group the other potential functionalities under themed groups, see Figure 6. This supports the idea that people could gradually extend their Vizier as their needs evolve. This configuration scheme will serve as input to define the scope of our pre-trial demonstrator.

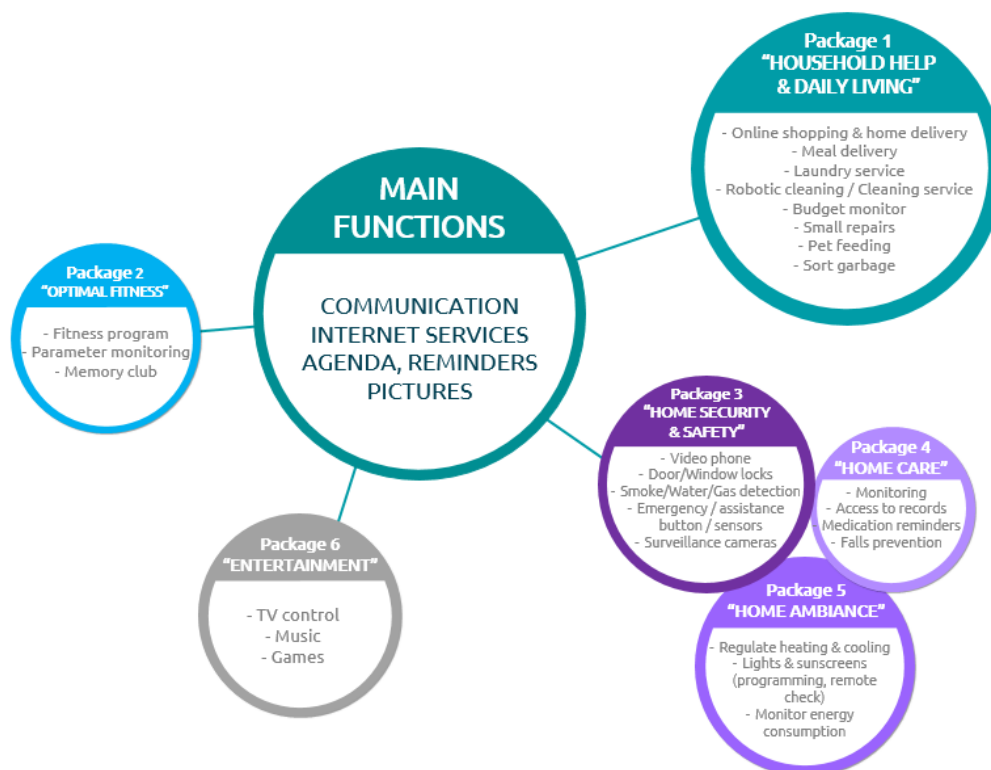

FIGURE 6 CORE VIZIER AND PROPOSED THEMATIC "PACKAGES"

6.2 Meeting the user needs

Building the 'jobs-to-be-done' part of these use cases, confirmed that a user friendly Vizier solution will meet actual user needs supporting them to improve the management of their daily life and to stay mentally, physically and socially active and ensuring their safety and wellbeing.

The following functions have been confirmed to be important by the combination of surveys and use cases and were recommended to be included in the pre-trial demonstrator if feasible from a technical point of view:

- (Medication) reminders
- Memory training
- Tips for local activities
- Physical activity promotion and tracking

6.3 User profiles for the (pre-) trial

For the development of our solution, we decided to focus on the basic functions and the 'optimal fitness' package (Figure 6). As this represents a focus on people with a low to medium dependency on care.
