# Final development of GoldUI

## GoldUI Final Overview

GoldUI is a personalized common multi-device interface that enables seniors to access in a simple way to a wide range of online services, such as:

- ✓ **Emergency service** to contact with relatives or carers quickly in case of emergency;
- ✓ **Reminder service** to set up reminders of personal events and appointments (or battery level);
- ✓ **Entertainment service** to watch TV, listen the radio or visit the favorite web pages;
- ✓ **Social update service** to keep in touch of relatives and friends easily;
- ✓ **News service** to know the international and local news;
- ✓ **Shopping list service** to create and share the shopping list with the carer;

by means of a simple, clear interface adapted to each senior according to his/her limitations and personal preferences set up in his/her GoldUI Profile.

GoldUI online services can be accessed through desktop PCs and multiple Android devices like smartphones, tablets, TVs (through Android Set-Top-Boxes) and digital radios.

Integration of new third party online services in GoldUI interface is really easy thanks to the GoldUI templates.

## GoldUI User Profile

GoldUI Profile is a key concept in GoldUI. The set-up of GoldUI Profile can be performed either by the carer or by the senior himself, although it is recommended that the carer manages it.

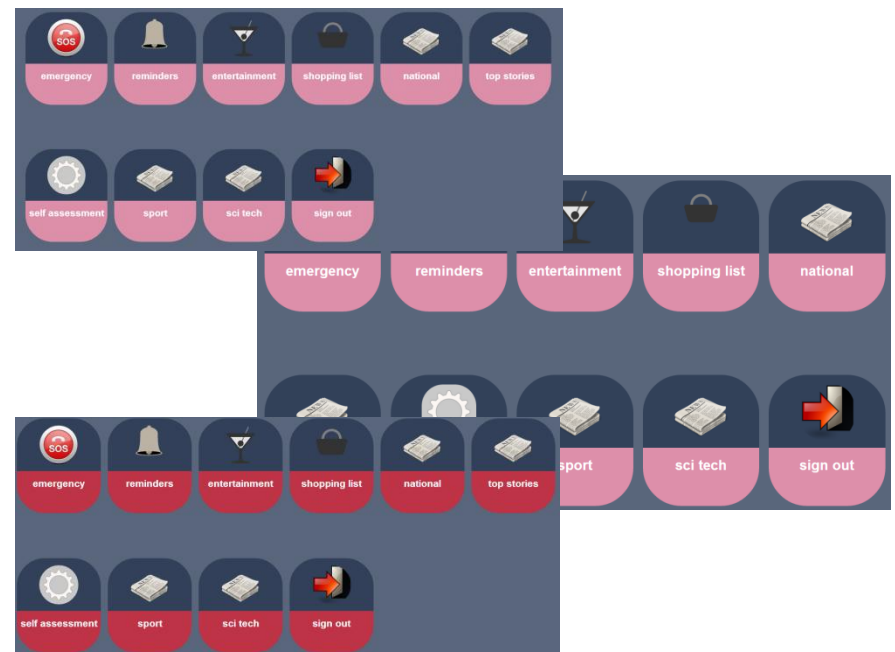

The carer can manage several end users and create/edit their user profiles in order to configure the accessibility information and the different services which form the personalized GoldUI service.

## Content Adaptation

Content Adaptation module enables to create a tailored interface for each senior, including adapted font sizes, contrast colors, text-to-speech functionality, or even, a specific simplified interface option with just icons and without text, according to limitations and personal preferences set up in the GoldUI Profile.

Ultimately, Content Adaptation module provides an easy and common interface through which access to multiple services.

## GoldUI Reminders Service

GoldUI Reminders Service allows seniors to check the list of today's, tomorrow's and next week's reminders introduced by the carer previously. In addition, other specific functionalities for the mobile application have been included:

- ✓ Alarm prompt is displayed on the screen and notified by voice and vibration when a reminder expires
- ✓ Automatic update of today's reminders when booting the phone and each two hours
- ✓ Battery level is checked when booting the phone and each 30 minutes.

## GoldUI Entertainment Service

GoldUI Entertainment Service allows seniors to access to different on-line entertainment contents like TV, radio or webs easily since most of existing solutions/services are not tailored to elderly and/or people with disability, and besides, all TV and radio channels offers on-line services but seniors exhibit difficulties in finding the right content.

## GoldUI Emergency Service

GoldUI Emergency Service allows seniors to contact with relatives or carers quickly in case of an emergency is required. Their most important features are:

- ✓ Emergency Button to send a pre-defined text message to a carer in case the senior needs help quickly.
- ✓ Immediate Calls make a call easily to primary carer.

The GoldUI Emergency Service is based on Tiscali Indoona technology for VoIP communication currently available for mobile platforms (Android and iOS) and for PC (Windows and Mac OSx).

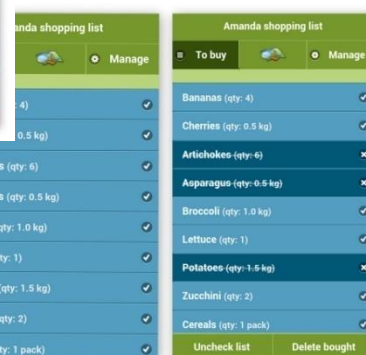

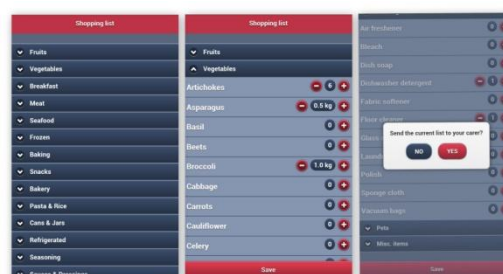

## GoldUI Shopping List Service

GoldUI Shopping List Service allows seniors to easily draw up a shopping list and share it with the carer who will take care of purchasing the needed items.

GoldUI Shopping List service is composed by two distinct and complementary applications, one for the senior and the other for the carer, offering different functionalities.

The senior can create and update the shopping list starting from a set of predefined items. Once the shopping list is complete, the senior can save it and, doing so, share it with the carer.

The carer can access to the shopping list prepared by the senior, and update it removing the purchased items during the shopping. Also, the carer can manage the shopping list service and view the nearest shops.

## GoldUI Social Update Service

GoldUI Social Update Service allows seniors to access easily to different social news related to their relatives and friends with the aim of keeping in touch with them and making them feel less isolated.

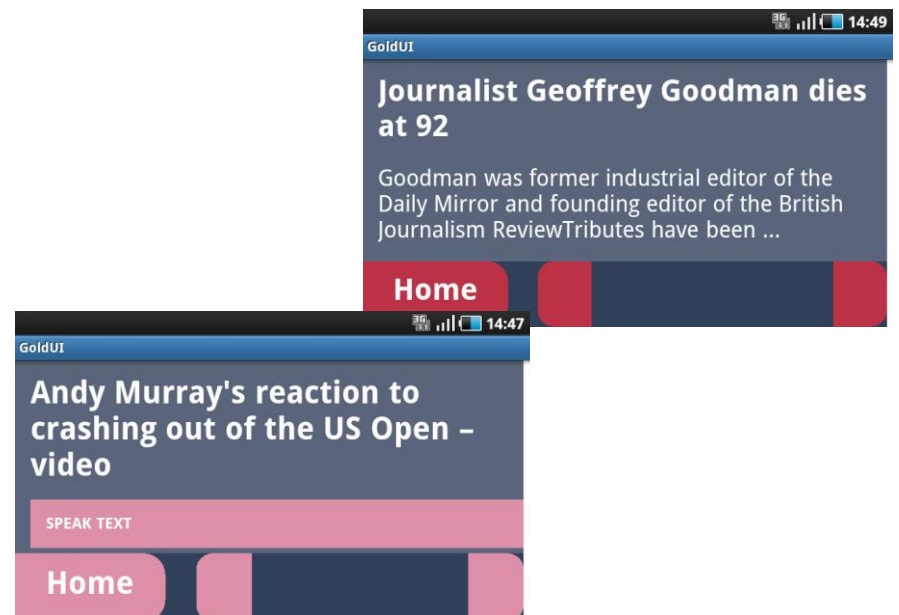

GoldUI Social Update Service is based on Facebook social network.

## GoldUI News Service

GoldUI News Service allows seniors to access easily to general news (world, business, sports, culture and entertainment) coming from the main national sources of information like online newspapers and press agencies, and lifestyle news that are news related to social activities interesting for the seniors, coming from thematic websites focused on travel, volunteering, local events and events for seniors.

GoldUI News Service is based on categorized news provided by Tiscali.
