GoldUI is a Project cofunded by European Commission, Ministerio de Industria Turismo y Comercio of Spain (MITYC), Technology Strategy Board (TSB) of UK and Ministero dell'Istruzione, dell'Università e della Ricerca (MIUR) of Italy

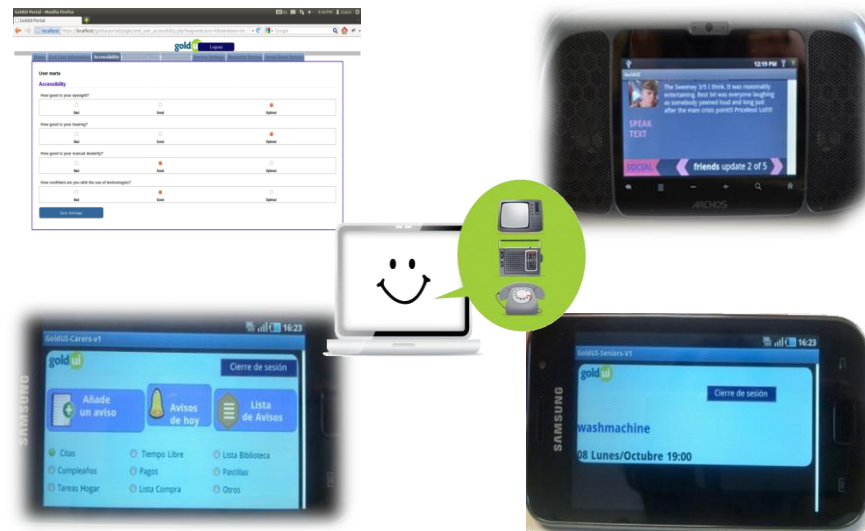

GoldUI Developments

GoldUI Developments Overview

GoldUI is a multi-device service that through a GoldUI profile gives you access to different personalized services and covers various user needs in daily life according to the user's limitations and personal preferences, as for example:

- ✓ Local news.
- ✓ Reminder of personal events and appointments.
- ✓ Social life: keeping in touch with relatives and friends.

All GoldUI services are available through PCs, smartphones and digital radios.

GoldUI Developments

GoldUI Profile

GoldUI Profile is a key concept to GoldUI. GoldUI Profile is the development and maintenance of a cloud-based secure user profile, which is intended to be maintained by a trusted relative or carer.

The carer can manage different end users accounts and access to the accessibility information and configure it.

Also, the specific service setting can be configured.

Once the carer establishes the service that he/she wants to include, he/she can configure each of them (under construction).

For example, in Personalized News, the carer can setup different preferences like languages, newspapers or events, or in entertainment, he/she can select radio stations, websites, etc.

In addition, the carer can also access from here to the Reminder Service or Social News Service.

GoldUI Developments

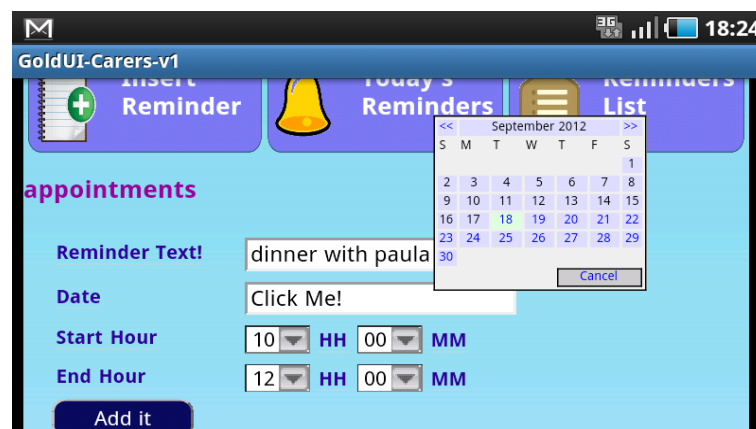

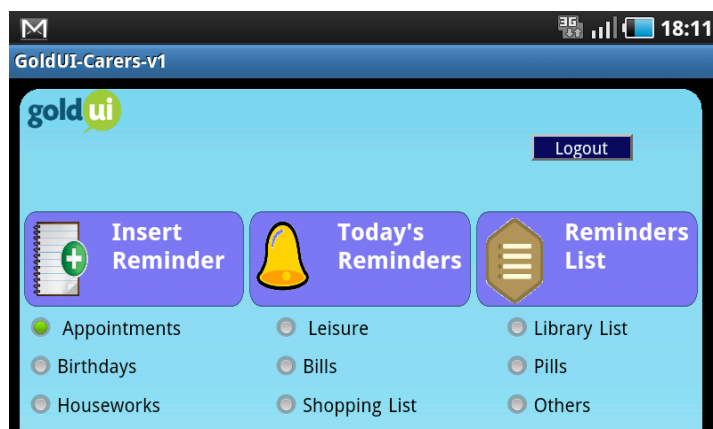

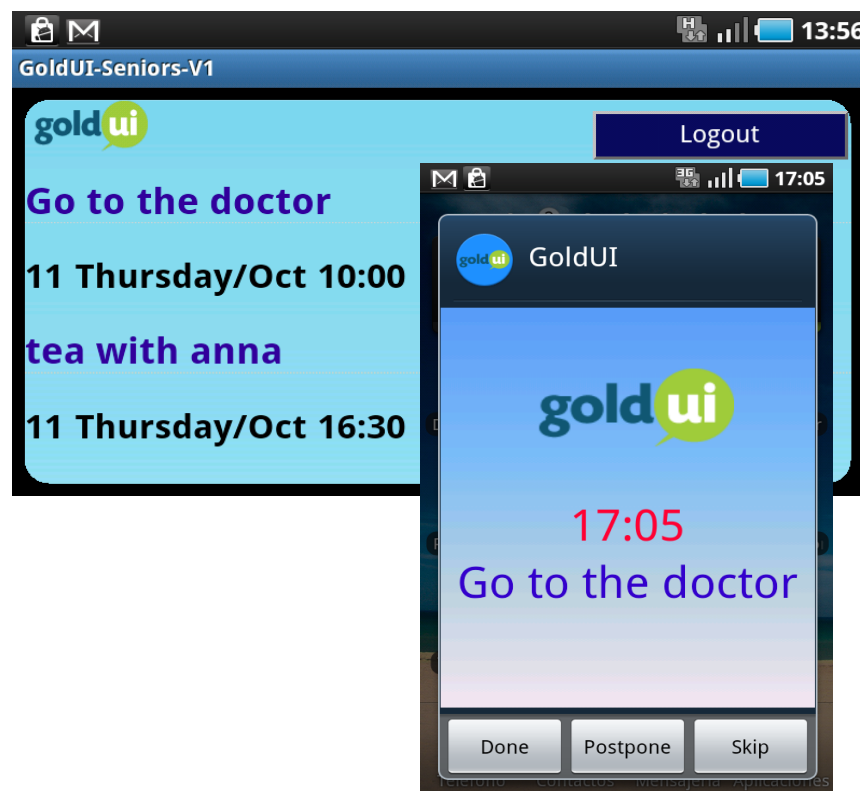

GoldUI Reminder Service

GoldUI Reminder Service is composed of two subservices:

- ✓ GoldUI Reminders Carer : for the reminders creation and review.
- ✓ GoldUI Reminders Seniors: for the review of today's calendars and for the handling of the reminders alarms.

GoldUI Reminders Carers allows to Carers to insert a new reminder in the different categories, review the list of Today's reminders from a specific category and review all the reminders list.

GoldUI Reminders only exists for smartphones or digital radios and allows to Seniors to review the Today's reminders list. In addition, at the corresponding time (alarm), both a prompt and a voice notification of the alarm appear in the corresponding device.

GoldUI Developments

GoldUI Social News Service

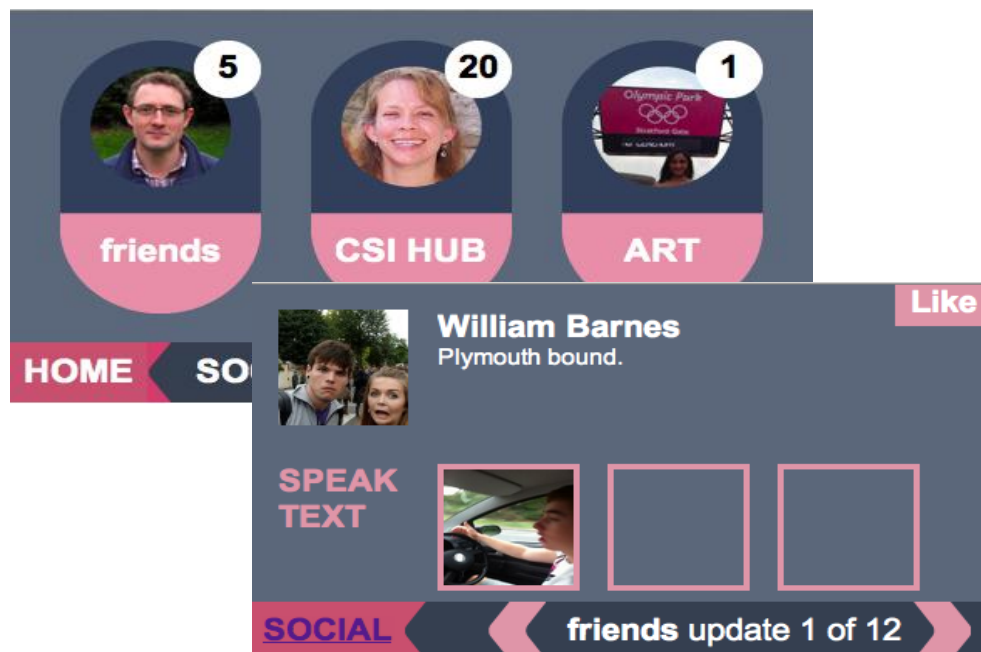

GoldUI Social News Service allows to elderly people:

- ✓ Being informed about events in each user's local community
- ✓ Being informed about travel opportunities planned by elderly person organizations
- ✓ Being better educated about local culture and places of interest
- ✓ Being educated about volunteer opportunities for the elderly

- ✓ Being better informed, having more alternative perspectives and being more organized with the news (for example, having easy access to local news).

GoldUI is based on Facebook and allows to carers to elect your feeds through the web application.

Finally, the senior can access to the android application in his/her preferred device.
