Relaxed Care Consortium

Relaxed Care (AAL 2012-5-199.) is a project within the AAL Joint Programme Call 5
The consortium members are:

Partner 1	*AIT AUSTRIAN INSTITUTE OF TECHNOLOGY GmbH (AIT, Project Coordinator, AT)*
Contact person:	Martin Morandell
Email:	martin.morandell@ait.ac.at

Partner 2	*Hochschule Luzern Technik & Architektur – iHomeLab (IHL, CH)*
Contact person:	Martin Biallas
Email:	martin.Biallas@hslu.ch

Partner 3	*50plus GmbH (50p, AT)*
Contact person:	Frauke Lettmann
Email:	frauke.lettmann@50plusgmbh.com

Partner 4	*New Design University (NDU, AT)*
Contact person:	Sandra Dittenberger
Email:	sandra.dittenberger@ndu.ac.at

Partner 5	*Mobili (MOB, SI)*
Contact person:	Jure Lampe
Email:	jure.lampe@mobili.si

Partner 6	*Szenographie (SZE, CH)*
Contact person:	Ralph Eichenberger
Email:	contact@szenografie.com

Partner 7	*Ibernex (IBE, ES)*
Contact person:	Antonio Remartinez
Email:	antonio.remartinez@ibernex.es

Partner 8	*Soultank AG (SOUL, CH)*
Contact person:	Bianca Redel
Email:	bianca.redel@soultank.ch

Partner 9	Schweizerisches Rote Kreuz Luzern (SRK, CH)
Contact person:	Nick Bolli
Email:	nick.bolli@srk-luzern.ch

Abbreviations

Abbrev.	Description
AP	Assisted Person
IC	Informal Caregiver
PM	Project month

Executive Summary

This document lists the identified target groups and materials relevant for dissemination. Chapter 5 contains for each partner of the consortium the individual dissemination plans. However, the plans have preliminary character (meaning that they can be subject to modifications), the over-all purpose of organizing the dissemination activities within the consortium is not impaired.

1 About this Document

1.1 Role of the deliverable

To account for the difficulties of planning several years in advance, this deliverable is split in parts A, B and C. Up to project month 18 (i.e. October 2014), this document will mainly focus on the first 18 project months – including the data from D8.3A. As soon as dissemination events can be participated for the period of month 19 until 36, this document can be extended accordingly. They will be pasted in D8.3C as it becomes available.

Part C of this document should be finished in project month 24 (April 2015), but each partner is encouraged to use and update the document until the end of the project.

1.2 Relationship to other Relaxed Care deliverables

The deliverable is related to the following Relaxed Care deliverables:

Deliv:	Relation
D8.3A	Dissemination plan A (until August 2013).

2 Introduction

The dissemination and publication of the results obtained are one of the primary aims of scientific researchers. The publication of the results involves the conflict between privacy interests of the individual participant and the need for free exchange between scientific experts. A process will be established during the project that helps to reduce the risks arising out of this conflict. So nothing shall be disseminated without prior agreement of the project partners.

As soon as all new technique and immaterial values have been protected through the priority of patent, design and/or trademark applications, the result of the project will be promoted through scientific journals, newspaper articles, user-stories, live events, the web page and press-releases. The aim is to create a maximum marketing effect, and to establish a demand. Therefore all media will be used for dissemination: printed media, radio, television and internet.

The dissemination activities will address end users, experts, the general public, public authorities, caregiver organisations as well as possible market actors. The dissemination activities will be adapted to the respective target group.

3 Target Groups

3.1 Introduction

In this chapter the target groups of dissemination are defined. These target groups are the stakeholders of the research project.

The benefits that are planned to offer to each target group are listed.

3.2 Different Target Groups

Table 1: Product stakeholders as target groups

Target Group	Description	Benefit
End User / Assisted Person (AP)	Elderly person, who must rely on some simple assistance by other to manage everyday life, or who wishes to be monitored lightly for nobody else is living with her/him who could help. The AP also enjoys to ask for assistance, because the request is output in a pervasive way at the side of the informal caregiver IC (definition of IC: see below). See also "Persona" developed in WP2.	Greater independence by being enabled to stay at home (instead of going to a retiring home). Improved quality of informal care by providing assistance when needed. Simplification of communication between AP and IC.
End User / Informal Caregiver (IC)	IC is the person, who is contacted by the AP when he/she needs assistance. See also "Persona" developed in WP2.	Assurance that the AP is OK is output pervasively. This way, the IC has all the time the information and assistance requests, if not time critical, are signaled discreetly.
End User / Professional Care Organization	While the AP is the same as described above, the role of the IC is taken over by a professional care organization.	The user-interface at the AP remains unchanged and provides still all advantages. However, on the side of the professional care organization, a special user interface allows the efficient management of multiple APs. A further benefit is to be able to sell the same RC hardware to AP-IP pairs and to AP-professional care organization pairs. One system for all.
Distributor	Distributors are professional care organizations, associations for elderly, (internet) shops for health needs, insurances.	Provides system-in-a-box to end users (most of time: IC, who buys RC system). No support of further companies needed.
Service Developer	Hard- and software developer. Not only members of the consortium, but also 3rd party companies, research institutions, or hobby developer.	The RC system is open. Developers have the possibility to develop own software solutions (Apps). Although it is less complex to develop software applications, in principle it is also possible to develop/connect new sensor

		hardware and/or pervasive, (furniture like) objects acting as UI. 3rd party companies have the option to introduce their business models.
Media	Media are all channels to contribute information. There are the classical media like newspapers, television and radio but also the new media must be considered like internet and social media.	
Society	The whole society is involved in financing the health system and the retirement provision.	The RC-System impacts the health system by providing an option to keep elderly longer in their homes and lower the burden of health costs by improving the quality of the informal care.

Table 2: Project stakeholders as target groups

Target Group	Description	Benefit
Customer of Consortium Members	Customer of each member of the RelaxedCare consortium (esp. 50p,SRK,IBE,MOB)	Customer awareness about how partners participate in research to shape actively the future. Customers are also potential test groups.
SME/LE members of the consortium	Business partners in the consortium.	By participating in the project, the development of new hardware, software, design and business model ideas is supported. Ideally, a prototype ready for industrialization should be among the results of the project.
Research partners of the consortium	Commercial research institutions and universities.	The research partners bring in their expertise to realize the project. On the other hand, they can extend their experience, and since the RC-system will be open, they can also use it in further research work.
Tester	Testers are the representatives of the end users. During the project they give feedback to the consortium.	Testers can influence with their feedback the outcome of the project.
End / User Organization	End users who are organized officially in some form. E.g. associations for retirees, or special-care homes. Often the above mentioned testers are members of an end user organization.	As the testers often are members of the end user organization, and they can influence the outcome of the project
Society	The whole society is involved in financing the health system and the retirement provision.	The RC-system helps to unburden the health care system by allowing elderly to stay longer independent in their homes and by improving the quality of informal care (especially, when IC and AP are not living under the same roof).
Media	Media are all channels to contribute information. There are the classical media like newspapers, television and radio but also the new media must be considered like internet and social media.	
Government	The governments decide on funding research projects.	Government is interested in coping with the demographic change. Funding a project like RelaxedCare helps by introducing a particular way of serving the new needs generated by the change.
Insurance	In particular health insurances.	Supporting RelaxedCare helps to reach the aim of not too high costs

| | of the health system. |

4 Dissemination Material and Activities

4.1 Introduction

Based on the knowledge of the interests and benefits of the target group the corresponding material and activities for dissemination have to be planned. In this chapter the possible materials, activities and channels for dissemination are described. The target group must be matched with the material and activities.

So the following aspects should be considered:

- What is the purpose of the planned activity?
- Which target groups are involved?
- Which dissemination material and channels shall be used?

Another important aspect is the language of the material. The language used for the dissemination material depends on the target group. Especially if end users are addressed, their language must be used. For "official" documents where the target group is the government, English is used as language as RelaxedCare is an international project.

4.2 Material and Activities

Table 3: Dissemination material, activities and channels

Dissemination Material	Description
Publications	
- _General Press Releases_	Written information that is addressed to the news media to spread news about the product and the project. This information shall be placed in the media.
- _Articles in Journals / Magazines / Newspapers_	Articles not peer-reviewed to be released in non-scientific media.
- _Conference Articles / Papers / Posters_	Scientific work that is intended to present at conferences; usually peer-reviewed.
- _Peer Reviewed Papers_	Papers submitted to scientific journals and published after a review process by independent reviewers.
- _Special Issue of Journals_	Special issues of scientific journals focus on a restricted area normally covered by the journal. Normally experts in the addressed field are invited to present articles and/or their work to give an overview over the topic and to trigger future discussions and collaborations.
Project Poster	Presents the general aims and vision of the project RelaxedCare.
Project Flyer	A document with a few pages informing about the aims and vision of the project RelaxedCare.
Project Brochure	Document containing all important facts and aims of RelaxedCare.
Website	Contains general information about the project. It is used to present facts, descriptions, the objectives, progress and results of RelaxedCare. It is the virtual appearance of the project.
Web 2.0	Interactive communication with target groups using online platforms. The focus is interaction and communication with users in contrast to websites which just allow passive viewing. Examples for Web 2.0 are

	social networks, such as Facebook or Twitter, blogs, wikis, etc.
Newsletters	Can be sent at regular intervals to a wide range of interested people. Good way of distributing news to interested people.
Handbooks / White Papers	Internal/external project documentation, which will be helpful for the use of the product of RelaxedCare and the RelaxedCare platform.
Seminars / Congresses	Event aimed at a specific topic/area/market where lectures and workshops are central.
Trade Fairs	Massive, stage-set, and usually regular trade event at which a large number of manufacturers from a particular industry present their products and show their capabilities to distributors, wholesalers, retailers and End-Users.
Demonstrations	Demonstrations of RelaxedCare results (the walker, the platform, services and UIs) to target groups.
Workshops	An educational seminar or series of meetings emphasizing interaction and exchange of information among a usually small number of participants aimed at a specific topic.
Other Dissemination Materials / Activities / Channels	E.g. business meetings

5 Dissemination Plans

5.1 Introduction

Although dissemination of the project ideas and results is a joint activity of all partners (if resources are assigned within the project regarding dissemination), each project partner has its own dissemination possibilities, strategies and approaches. Thus the dissemination plans are presented individually for each partner to not limit these activities and opportunities. It is intended to collaborate, if needed, in all dissemination activities and to reuse material, information, channels, etc. to avoid extra effort. Furthermore overlapping activities will be combined to join forces of partners with resources for dissemination activities.

The plans shall describe what and where each partner plans to disseminate the project idea and first results and findings in the first 18 months of the project (PM1 – PM18, until October 2014). The presented activities are a plan and additional dissemination activities (not mentioned here) are more than welcome. The plan is a 'declaration of intent' and will leave flexibility.

5.2 Individual Dissemination Plans

In the following the individual dissemination plans of each partner are presented. These plans differ in their granularity due to various reasons, but mainly since some partners cannot plan their dissemination activities beforehand. Nevertheless the planned activities are promising to guarantee broad dissemination of the project and its results.

5.2.1 AIT

Table 4: AIT Dissemination Strategy

AIT has the following role in the project:
- Project coordinator
- Research partner

Dissemination Plan

Name	Location	Date	Type of Dissemination Material	Target Group

5.3 Compilation of potentially relevant dissemination opportunities

In contrary to the sub-chapters before, which serve to organize the participation in dissemination events on partner level, the intention behind this sub-chapter is to have a place to document potentially interesting dissemination opportunities covering relevant scientific events, journals and marketing possibilities likewise. It can contain even past events, for the purpose of being able to search in certain time intervals for successor events. However, most importantly, it is encouraged to extend the list and to make it a living document for the benefit of all partners.

5.3.1 List of potentially relevant dissemination opportunities

5.3.2 Future events

Name	URL	Submission Deadline	Prio (L/M/H)
CCCiC is an international workshop series set out to discuss issues of collaboration, coordination and communication between informal caregivers, their friends, family members, and health professionals, as well as the design and development of system to support them.	http://group2014.cccic.org/	Florida (USA), November 9, 2014	
Pervasive system and computing is an emerging field of research and revolutionary paradigm for next-generation IT applications. The 13th International Symposium on Pervasive Systems, Algorithms, and Networks (I-SPAN 2014) aims to establish an international forum for engineers and scientists to present their excellent ideas, latest innovations and experiences on Pervasive Systems, Algorithms, and Networks.	http://umc.uestc.edu.cn/conference/ISPAN2014/index.php	Dec. 19th-21st, 2014 in Chengdu, Sichuan, China Paper submission deadline: Aug. 10, 2014

5.3.5 Search terms

When searching for appropriate dissemination opportunities, the search should also comprise the search terms listed below.

- Assistive technology at home
- informal carer support
- social computing
- Collaboration systems
- pervasive computing in healthcare
- health information technology

5.4 Summary

Beside the general dissemination plan every partner has its own plan. These plans are listed in this chapter. It's important to keep in mind, that the plans have been created with the knowledge of "today" and that they can change during the progress of the project.

Some partners did not plan dissemination activities during the first half (M1 to M18) of the project.
